### People Don't Fail, They Give Up!

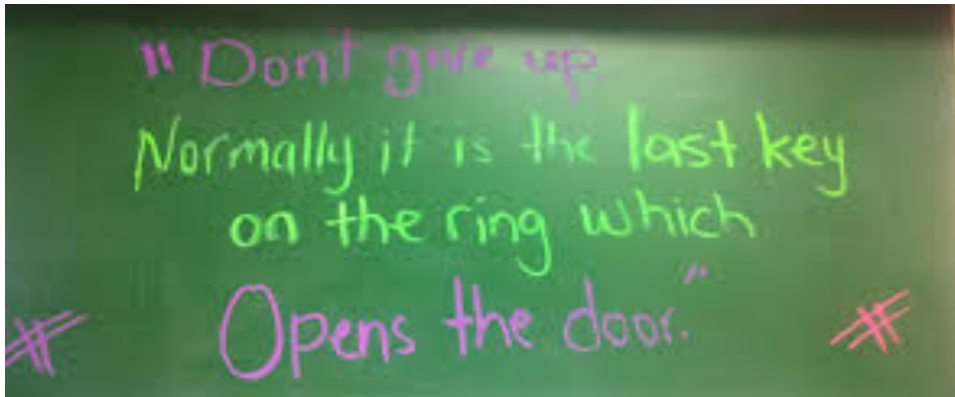

There is a big difference between failing and giving up. However, the line which separates both failure and giving up is foggy. Often we find it difficult to differentiate which is the cause and which is the result. People often get confused whether they fail that is why they give up or they give up that is why they fail. We often see people more successful than us and lose confidence. It is difficult to achieve even the attainable goals due to the low confidence. This is why a large number of people are not able to achieve their goals. They stop their success journey mid-way and think why did they not achieve their goals?

**Giving up is the reason!**

**1. Careless Goals:** People often set goals they don't even care about or which are too ambitious to achieve during the given time. They always say that they want to achieve a particular thing but do not commit themselves to achieve it.

many distractions that can distract people from their path. These distractions could be things like electronics gadgets, social media other people, etc. These distractions consume our time and energy & we give up mid-way. Can we call it a failure?

**5. Not worth the result:** Many a times,

**2. Very tight timelines:** Even if the aim is set, it takes time to reach there. We often work with a mindset that this task should take this much time. Sometimes, the things do not go as per our calculations and if the goal is not achieved within our decided time frame, we give up mid-way. However, the fact of the matter is that if we had put in a little more time, we could have been there!

we realize midway that the efforts we are putting in are not worth the result and we give up. Can this be termed as failure?

**People do fail!**

**3. No Hard Work:** Success or achievement is not an easy task. It takes a lots of efforts, time & commitment to put forward our true potential. We might underestimate the difficulty level of a task in the beginning but it might actually require more resources & efforts to get embodied. If we are not willing to work hard than the set level, we are highly likely to give up mid-way and call it a failure while we have actually given up.

**1. Cheating on the way:** Many a times we are really willing to put in the hard work and time to achieve our goals. However, we set unrealistic goals which make us fail. Imagine, you want to lose weight and are willing to put in time and efforts to make it real, but if you do not control your diet and eat fatty food, will you be able to achieve the figure you wanted?

**2. No time to research:** Many a times we do not do our research properly before starting on a task. With incomplete information, things do look easy but when we enter into the water, we realize that the water is too deep. This is failing before starting and can't be called giving up!

**4. Distractions:** Today, there are so

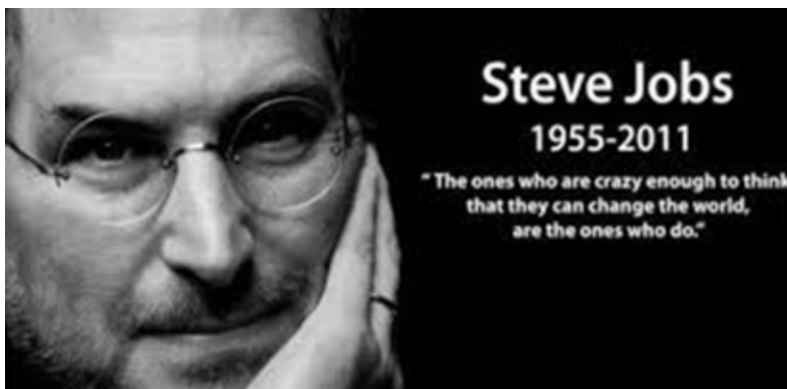

**3. Starting over-excited:** Every task we take up requires a proper research and execution plan. If we start over excited, we might start with a lot of energy and vigour but not anticipating things before beginning makes things look difficult and we give them up. This is a failure on our planning and execution part!

**4. Not applying our knowledge:** Many students really study hard but are not able to apply their knowledge while writing the paper. This could be because of nervousness, low confidence or whatever we may call it. However, this is a failure to use our knowledge at the place for which we worked hard.

**5. Opponent might be stronger:** We see in many team or individual sports that the player fails despite the effort from his end. He has worked hard, is willing to face the opponent but the opponent might be really more skilled and experience. In such a situation, you might not give up but actually fail!

**Conclusion:**

Determination and optimism are the main strengths to make our goal a reality. If we want to succeed at a task, however small it may be, we need to ensure that we are committed. At the same time, we also need to see the reality and attainability of our goals. This reduces the chances of giving up midway and terming it as a failure!
